

Digital Forensic Services

Computer Forensics

WHAT WE DO

The digital forensics experts at Envista Forensics help insurance claim and legal professionals navigate the complexities related to technology claims. We assist with answering questions such as:

- What happened, and what data was compromised? Was this intentional or a “mistake”?
- Who is behind the incident? Who is responsible for security failures?
- When did the incident take place? When should the company have known?
- How did the incident occur?

DIGITAL INVESTIGATION

Preserving digital evidence that is critical to the event is of utmost importance. Envista Forensics experts deploy court-tested and defensible techniques for collecting and preserving Electronically Stored Information (ESI) on company networks, computers and portable storage devices, with a focus on authentication and chain of custody preservation. We analyze the available data so that accurate conclusions can be drawn regarding the fundamental cause of the event.

EXPERT TESTIMONY

Envista Forensics experts have vast experience with collecting and identifying digital evidence, as well as with interpreting and presenting this information for litigation. Our findings are documented in an expert report crafted by highly-experienced computer forensics professionals with world-class pedigrees, certifications and significant court testimony experience.
