Hardware/Software Failure Analysis

## WHAT WE DO

In today's business environment, computer hardware and software play an integral role in company operations. Failures to these important systems can be catastrophic in terms of business interruption. Identifying the cause of hardware and software failure is pertinent for restoring business operations, resolving insurance claims, and expediting litigation.

Our digital forensic experts examine devices that commonly fail, such as hard disk drives and cooling fans, to determine the type of error or failure experienced. Ultimately, the testing performed by Envista Forensics technicians strives to answer one question for our clients: What is the cause of the failure or error experienced?

Envista Forensics forensic experts are experienced expert witnesses who have provided hundreds of expert reports to the legal community following high-exposure technology equipment failures and other losses.

## ENVISTA FORENSICS HAS EXPERTISE PERFORMING FAILURE ANALYSIS ON IT EQUIPMENT SUCH AS:

- Servers, Switches & Routers
- Cooling Fans
- Hard Disk Drives
- Software
- Storage Devices (SAN/NAS)

## OUR FORENSIC EXPERTS HELP DETERMINE IF IT FAILURES WERE CAUSED BY:

- Lightning Damage
- RAID Controller Failures
- Power Surges
- Software Corruption
- Power Failures
- Application Errors
- Hard Disk Drive Failures
- Cyber Incidents
